THE PROBLEM!

Problems

Students are playing sports, not learning them

- No structured curriculum
- No defined skill-progression
- No assessment or tracking

Teacher bandwidth is extremely low

- One coach handles too many students
- No time for 1:1 correction or feedback
- Focus shifts to "managing" instead of "teaching"

No repetition -) No retention

- Skills aren't practiced consistently
- Students don't revise or reinforce techniques
- Learning resets every session

Confidence issues

- Fear of performing in front of peers
- Stereotypes around which gender plays which sport
- Kids opt out when they feel judged

Limited resources & space constraints

- Grounds are shared
- Not enough equipment for all
- Students spend more time waiting than playing

Over-focus on winning, under-focus on learning

- Performance > technique
- Kids become afraid of failing
- Only talented students get attention

USER PERSONA

ARYAN SHARMA

Age: 9 Years

Occupation: Gateway International School

Location: Harayana, India

ABOUT AARYAN

Aryan is a bright, curious kid who learns best through movement, games, and challenges.

Sports excite him more than academics, and he's always eager to try new skills whether it's a cricket drill, a fact about a new sport, or a fun daily quest.

He is social, energetic, and heavily influenced by what his friends like. Digital tools attract him only if they feel fun, clean, and not like homework apps.

GOALS

- To explore and improve in sports
- To learn new skills through fun, gamified tasks
- To track his daily progress without effort
- To complete quick quests during school breaks
- To feel proud of his improvements

QUOTE

I like learning only when it feels like a game.

WHAT HE WANTS IN WONDERVERSE

- Skill tracking without effort
- Quick quests in each environment
- XP for real-life drills and movements
- Sports-themed planets
- A night reflection planet (what made him happy today?)
- A dashboard that tells him:
 - "Today's Skill Attempted"
 - "Homework planets to visit"
 - "Your XP today"

PAIN & GAIN POINTS

Gains / Strengths

1. Learns fast through play
2. Very social and energetic
3. Enjoys exploring new challenges
4. Proud when he completes sports-related tasks

Pain Points

1. Boring homework apps without fun elements
2. Doesn't track what skill he learned today
3. Forgets assignments easily
4. Academic sessions feel long and tiring

TECH BEHAVIOUR

- Uses school tablet occasionally
- Prefers clean, fun, sports-themed UIs
- Needs simple dashboards
- Responds well to visuals over text

MOTIVATION

- Rewards, XP, badges
- Colourful, fun visuals
- Short tasks he can finish quickly.
- Being appreciated by coaches/teachers
- Playing with friends
- Discovering hidden skills

DAILY CONTEXT

- Most excited during breaks and sports periods
- Feels calm and focused in the library
- Tired and less engaged during homework time
- Morning rush → minimal planning

FRUSTRATION

- Playing cricket, football, and trying new sports
- Exploring fun, gamified apps
- Collecting badges, XP, rewards, and streaks
- Hanging out with friends during breaks
- Discovering new skills and sports facts

INTERESTS

FRUSTRATIONS

- Homework and school apps feel boring, not fun
- Forgets assignments and daily skills learned
- No easy way to track sports or progress
- Long classroom hours feel tiring

USER OBSERVATION

DAY 1

The UKG group was extremely interactive and excited, responding enthusiastically to everything around them. Their environment is bright, colourful, and filled with block-style, cute interiors that make them feel comfortable and curious. These children thrive on fun, playful learning and require complete attention from facilitators.

- Very interactive, energetic, and curious and they ask a lot of questions
- Surroundings are colourful, bright, and visually stimulating.
- Need comfort in the spaces they're in
- Engage well with unique, hands-on activities. Fidget a lot, highly expressive
- Don't strictly follow rules but want to enjoy learning
- As they grow, they become more disciplined but talk less and observe more.

USER OBSERVATION

DAY 2

Older students showed a noticeable shift in behaviour and communication patterns. Class 3 remained chatty and open, whereas Class 6 became more straightforward, reserved, and harder to engage in conversation. Teachers intentionally use trends and updated information to maintain attention. Their interest in sports is selective they know little unless they are personally passionate about a specific sport.

Class 3: very chatty, responsive, and easy to engage

Class 6: reserved, straight to the point, fewer conversation

Teachers use trends and current topics to keep students involved

General awareness of sports rules or players is low

If they love a sport, their knowledge increases significantly

Prefer fun, interactive games that are easy to understand

Engagement increases when activities are simple, playful, and relatable.

LET'S REVOLUTIONIZE LEARNING TOGETHER

Thank you for exploring Wonderverse.

Together, we're building a world where sports, learning, and play merge into one powerful experience.

With your support, Wonderverse will continue to inspire, challenge, and empower every player to grow—one skill, one quest, and one win at a time.
